

Project Description

ScholarIQ is an AI-powered web platform designed to simplify and personalize the process of discovering international scholarships. The system uses intelligent algorithms to recommend scholarships tailored to a student's academic profile, nationality, and educational goals.

Instead of storing or hosting listings manually, **ScholarIQ** connects students directly to verified external sources through trusted URLs. With smart filters for country (**e.g., USA, UK, Germany, Canada, Turkey, etc.**), academic level, and funding type, students can quickly find relevant opportunities.

The platform aims to increase access, reduce search time, and support students from developing regions by making the scholarship discovery process easier, smarter, and more transparent.

Problem Statement

Students across the world struggle to find genuine and relevant scholarships. Information is often scattered across various websites, outdated, or even fraudulent. Many students miss important deadlines or apply to irrelevant opportunities due to the lack of a centralized, smart platform. The absence of real-time tracking, personalization, and AI-driven tools leads to inefficiencies and missed academic opportunities.

Targeted Audience

1. Students seeking international undergraduate or postgraduate scholarships
2. Students from developing countries (e.g., Pakistan, India, Nigeria, Egypt, etc.)
3. Academic counselors and advisors
4. NGOs and educational platforms supporting global education access

Scientific Area / Project Type

- Artificial Intelligence (AI)
- Web Development
- Recommender Systems
- Natural Language Processing (NLP)
- Educational Technology (EdTech)

First Competing Product: ScholarshipsAds.com

Top 5 Features:

1. Global scholarship listings
2. Filters by country and degree
3. Simple UI
4. Basic email newsletter alerts
5. General content, not personalized

Second Competing Product: OpportunityDesk.org

Top 5 Features:

1. Scholarships, internships, fellowships, events
2. Country-level filters
3. Responsive web design
4. Manual email subscriptions

How ScholarIQ is Better

Feature	ScholarIQ	Existing Platforms
Personalized AI Recommendations	✓ Yes	✗ No
Bilingual Support (Planned)	✓ Urdu + English	✗ English only
Deadline Alerts (Email)	✓ Yes	⚠ Basic newsletter only
User-Controlled Verified Access	✓ provides official URLs only, no hosted data	⚠ Manual listings or outdated uploads

Social Impact on Society

- **Promotes Educational Equity** – Makes quality opportunities accessible for everyone
- **Reduces Academic Stress** – Provides alerts and accurate info to plan better
- **Improves Success Rates** – Personalized suggestions = higher chance of selection
- **Supports Global Mobility** – Helps students pursue education abroad confidently

Root Causes of the Problem

1. Scattered and outdated scholarship information
2. No intelligent filtering or personalization
3. Manual and time-consuming process

Consequences of the Problem

1. Students miss deadlines
2. Wasted effort on irrelevant or fake scholarships
3. Increased stress and confusion
4. Unfair access to information
5. Poor application outcomes

Lost Objectives Due to the Problem

1. Personalized and stress-free access to real opportunities
2. Efficient, smart decision-making
3. Curriculum-aligned and targeted scholarship guidance
4. Equal education access across countries and backgrounds
5. High-quality application tracking and success support

Technical Architecture

Frontend:

- **React.js with Bootstrap 5**
- Fully responsive UI for desktop, tablet, and mobile devices

Backend:

- **ASP.NET Core Web API (C#)**
- RESTful API services

Database:

- **Microsoft SQL Server**
- **Entity Framework Core ORM**

AI Components:

- **Natural Language Processing (NLP) Chatbot (Python-integrated)** – Assists students in finding relevant scholarships via chat
 - **Fraud Detection System** – Filters invalid or scam scholarship listings using pattern recognition
-
