

THE UNIVERSITY OF LAHORE

Department of Computer Science & IT

Faculty of Information Technology

Final Year Project Proposal

	Day		Month			Year			
DATE			-			-			

PRODUCT TITLE:	CareerCraft AI - Intelligent Interview & Resume Mastery Platform
KEY WORDS:	AI interview simulator, resume optimization, career preparation, NLP feedback, communication analysis, job readiness, ATS compatibility.
DOMAIN OF THE PRODUCT:	Career Development & Recruitment Technology
SUPERVISOR'S NAME:	Ms. Atifa Arooj

STUDENT INFORMATION				
Sr.	Student ID	Name	Email	Mobile
1	70135459	IMAN FAISAL	70135459@student.uol.edu.pk	0334-4777092
2	70139957	BILAL SHABBIR	70139957@student.uol.edu.pk	0300-5007912

Problem Identification:

Job seekers today struggle to prepare effectively for interviews and create resumes that match industry requirements. Existing resources such as career counselling sessions, online videos, and generic guides fail to deliver personalized, interactive, and real-time feedback.

Current challenges include:

- Lack of realistic, job-specific interview practice with adaptive questioning.
- No evaluation of verbal and non-verbal communication such as tone, pace, confidence, and body language.
- Resumes that do not align with specific job descriptions or pass ATS filters.
- Absence of continuous progress tracking and measurable improvement.

As a result, candidates often enter interviews unprepared, with low confidence and ineffective resumes, leading to missed opportunities. There is a clear need for an AI-powered solution that combines interview simulation, communication analysis, and resume optimization in one platform.

Furthermore, candidates often fail to identify specific weaknesses in their interview performance because they lack structured, detailed feedback. CareerCraft AI will address this by automatically detecting a wide range of potential issues in both verbal and non-verbal communication:

Speech & Audio Issues:

- Speaking too fast or too slow, affecting clarity and comprehension.
- Excessive use of filler words such as “um,” “uh,” “like,” or “you know.”
- Monotone delivery with no variation in tone or emphasis.
- Pronunciation errors, especially for industry-specific terms.
- Grammatical mistakes and awkward sentence structures.
- Low or inconsistent volume levels.
- Unclear articulation or mumbling.
- Long pauses or hesitation that break conversational flow.
- Going off-topic or failing to answer questions directly.

Body Language Issues:

- Poor eye contact with the camera or frequent gaze shifts.
- Blank or overly negative facial expressions.
- Slouching or closed posture indicating low confidence.
- Nervous movements such as fidgeting, tapping, or playing with objects.
- Overuse or complete absence of hand gestures.
- Poor lighting, distracting backgrounds, or unprofessional attire.
- Camera positioned at an unflattering or non-neutral angle.

By identifying these specific problems, CareerCraft AI ensures that feedback is targeted, actionable, and directly relevant to improving overall job readiness.

1- Product Market Analysis:

Target Audience:

Our solution is designed for:

- University students preparing for campus placements.
- Fresh graduates entering the job market.
- Professionals seeking career advancement or industry transition.
- Career counselling centers and training institutes.
- HR departments and corporate training teams.
- E-learning platforms offering professional development.

Potential Customers

- Universities and colleges providing placement support.
- Online recruitment platforms looking to improve candidate quality.
- Corporate HR teams conducting pre-screening and training.
- Government employment and skill development programs.
- Professional mentorship and coaching services.

Competitor Analysis:

Current platforms such as **LinkedIn AI** Interview Practice and **Resume.io** focus on isolated aspects of preparation, either offering resume building or basic interview question banks. They lack fully integrated systems that combine live AI-driven interviews, real-time analysis of verbal and non-verbal communication, multilingual support, progress tracking, and resume-job description alignment in a single solution. This gap allows CareerCraft AI to stand out as an end-to-end, intelligent, and adaptive preparation tool.

Market Opportunity:

The demand for AI-powered career preparation tools is rising rapidly as hiring processes become increasingly competitive and technology-driven. The global market for e-learning and career development platforms is projected to surpass \$400 billion by 2030, with AI-enabled recruitment and skill assessment solutions among the fastest-growing segments. With remote interviews and online applications becoming standard, CareerCraft AI's unique blend of interview simulation, communication analysis, and resume optimization offers a highly scalable and globally relevant solution.

2- Unique Value Proposition:

CareerCraft offers an all-in-one, AI-powered career preparation platform that goes far beyond conventional mock interviews or resume-building tools. Unlike existing solutions that focus on a single aspect such as static interview questions or generic resume formatting, CareerCraft delivers a fully integrated preparation experience that combines real-time interview simulation, communication analysis, and AI-driven resume optimization in one unified system.

Key elements that set CareerCraft apart include:

- Live AI-driven interviews that simulate realistic job scenarios with adaptive questioning based on the candidate's responses, closely replicating an actual interview environment.
- Verbal and non-verbal communication analysis using speech recognition, tone detection, facial emotion recognition, and posture tracking to provide objective insights into delivery, confidence, and engagement.

- Resume and job description alignment that automatically matches resumes to specific postings, identifies skill gaps, and suggests targeted improvements to increase hiring potential and ATS compatibility.
- Role-specific feedback tailored to the user's target industry, role, or career stage, ensuring feedback is relevant and actionable.
- Multilingual and accent support to make the platform accessible to a global audience.
- Progress tracking dashboard that stores past performance data, highlights areas of improvement, and provides measurable growth insights over time.

This combination of AI-powered simulation, detailed behavioral analysis, and intelligent resume optimization ensures candidates are fully prepared both in content and delivery, giving them a competitive edge in the job market.

3- Features:

To address the challenges in interview preparation and resume optimization, CareerCraft offers the following key features:

- AI-based interview simulation**
Conducts live, role-specific interviews using an AI interviewer that adapts questions in real-time based on the candidate's answers. Simulates various interview styles such as friendly HR, strict manager, or technical expert.
- Speech recognition and analysis**
Converts spoken answers into text for evaluation. Measures clarity, fluency, grammar, and vocabulary usage to provide objective scoring.
- Verbal and non-verbal communication evaluation**
Uses tone detection, speech pacing analysis, and emotion recognition to assess confidence, engagement, and hesitation. Tracks posture, facial expressions, and eye contact using computer vision.
- Adaptive follow-up questioning**
Generates context-aware follow-up questions based on the user's previous responses, closely imitating real interviewer behavior.
- Comprehensive interview report**
Provides a detailed report after each session, including scores for verbal delivery, content quality, and body language. Allows video replay with time-stamped feedback.
- Resume upload and parsing**
Extracts and organizes resume content automatically from PDF or DOCX files for easier analysis and comparison.
- Job description matching and skill gap detection**
Compares resume content to a selected job posting, highlights missing keywords and skills, and suggests targeted improvements to increase ATS compatibility.

- viii. **AI-driven resume improvement suggestions**
Offers recommendations for formatting, wording, and keyword optimization to align with industry standards.
- ix. **Voice-based resume feedback**
Allows candidates to receive resume improvement tips in audio format for greater accessibility.
- x. **Progress tracking and historical performance**
Stores past interview scores, feedback, and resume improvement history. Generates weekly improvement suggestions based on performance trends.
- xi. **Multilingual and accent support**
Recognizes and evaluates multiple languages and regional accents, ensuring inclusivity for a diverse user base.
- xii. **Cloud-based storage and access**
Securely stores user profiles, resumes, interview recordings, and feedback reports for anytime access across devices.
- xiii. **Personalized AI Training & Correction**
Provides targeted practice modules to help candidates address the exact issues identified during interviews.
 - **Speech Coaching:** Real-time pace monitoring, filler word alerts, pronunciation correction, and grammar improvement suggestions.
 - **Answer Structuring:** Teaches concise and impactful responses using methods such as STAR (Situation, Task, Action, Result).
 - **Tone & Intonation Training:** Demonstrates confident and engaging delivery through AI-generated examples.
 - **Body Language Guidance:** Live gaze tracking, posture correction tips, and gesture balancing recommendations.
 - **Environment Optimization:** Instant suggestions for lighting, camera framing, and background improvements.
 - **Appearance Recommendations:** Professional attire guidelines tailored to the candidate's target industry.
 - **Posture Correction Alerts:** Detects slouching or closed posture and suggests open, confident positions.
 - **Filler Word Alerts:** Identifies excessive use of words like "um," "uh," "like" and offers practice drills to replace them with short pauses or professional transitions.
 - **Pronunciation Correction:** Uses speech-to-text and phoneme comparison to highlight mispronounced industry-specific terms and provides correct audio examples for repetition.
 - **Grammar & Vocabulary Enhancement:** Highlights grammatical errors and awkward phrasing, with AI-generated rephrasings to improve sentence structure and word choice.

4- Revenue Generation:

To ensure the commercial viability, scalability, and long-term sustainability of CareerCraft, the following revenue models will be implemented, inspired by successful SaaS, ed-tech, and AI service platforms:

Freemium with Tiered Subscriptions:

A free basic plan will be offered with limited mock interview sessions and resume scans to attract users and allow them to experience the platform's core value. Paid subscription tiers (Basic, Pro, and Enterprise) will unlock advanced features such as unlimited live AI interviews, detailed verbal and non-verbal analysis, role-specific question banks, and extensive progress tracking.

Usage-Based Credits for AI Features:

High-compute AI services such as live video interview simulations and advanced resume optimizations will operate on a credit-based system. Users can purchase credit bundles (e.g., 100 AI interview minutes or 50 resume scans), ensuring costs are tied to actual usage.

Institutional Licensing (Per-User Seat Model):

Universities, training institutes, and corporate HR departments can license the platform for internal use. Pricing will be based on the number of active users (seats) with discounts for bulk purchases. Institutions will receive admin dashboards, aggregated analytics, and custom branding.

Corporate Interviewer Mode:

A dedicated version of the platform will be offered to organizations for conducting real recruitment interviews. This "Interviewer Mode" will allow HR teams to use the AI interviewer for pre-screening candidates, evaluating both verbal and non-verbal responses, and generating standardized performance reports to aid in hiring decisions. This can be sold as a corporate subscription or on a per-event basis.

Data Insights and Analytics Subscription (Future Scope):

In later phases, anonymized and aggregated performance analytics will be offered to educational institutions, HR teams, and research organizations. Insights on skill gaps, industry-specific competencies, and performance trends can be sold as a subscription-based service.

5- Marketing and Sales Strategy:

To ensure successful adoption and commercialization of CareerCraft, a targeted marketing and sales approach will be implemented to reach individual users, educational institutions, and corporate clients.

Target Market Segments

- University students and fresh graduates preparing for placements.
- Professionals seeking career advancement or industry change.
- Universities, training institutes, and career counselling centers.
- Corporate HR departments and recruitment agencies.

Marketing Channels:

Digital Marketing

- Launch a dedicated website and landing page featuring platform demos, testimonials, and feature highlights.
- Run targeted ads on LinkedIn, Facebook, and Google Ads to reach job seekers, HR professionals, and educators.
- Publish case studies and success stories on social media and career-focused blogs.

Industry Events and Career Fairs

- Showcase CareerCraft at career fairs, HR summits, and university placement events.
- Network with recruiters, talent acquisition teams, and placement officers.

Partnerships and Collaborations

- Partner with universities, online learning platforms, and recruitment agencies to offer bundled services.
- Collaborate with professional mentorship networks to provide CareerCraft as part of their training programs.

Sales Strategy and Pricing Models

Subscription and Licensing

- Offer individual subscriptions for job seekers and bulk licensing packages for institutions and corporations.
- Provide discounted student plans to encourage adoption at the academic level.

Corporate Interviewer Mode Sales

- Directly approach organizations to demonstrate how Interviewer Mode can streamline hiring processes and improve candidate assessment.
- Offer free pilot programs to HR teams to showcase measurable value before committing to a paid subscription.

Free Trial and Demo Access

- Provide time-limited free access for new users to experience AI interviews and resume analysis, with an easy upgrade path to paid plans.

This multi-channel strategy focuses on building awareness through targeted outreach, demonstrating value through real-world results, and establishing trust through partnerships and professional endorsements.

6- Risk Assessment:

Despite the strong potential of CareerCraft, certain risks and challenges may arise during development, deployment, and commercialization.

Technical Risks

AI Model Accuracy – Natural Language Processing (NLP) and emotion recognition models may misinterpret speech, tone, or facial expressions, especially in cases of strong accents, background noise, or poor lighting.

Mitigation – Use high-quality, diverse training datasets and continuously retrain models with real user data (with consent) to improve accuracy.

Integration Challenges – Ensuring seamless compatibility across multiple devices, browsers, and platforms may be complex.

Mitigation – Adopt a modular architecture, conduct cross-platform testing, and use widely supported frameworks and APIs.

Market Risks

User Adoption Resistance – Some job seekers may be hesitant to rely on AI feedback over human guidance, or may underestimate its effectiveness.

Mitigation – Offer free trials, demo sessions, and success stories to demonstrate tangible benefits.

Competition – Established platforms offering partial solutions could expand their features to compete.

Mitigation – Maintain a strong differentiation strategy by combining interview simulation,

behavioral analysis, and resume optimization into one platform, along with regular feature upgrades.

Financial Risks

High Infrastructure Costs – AI-based live video analysis and large-scale cloud storage can be expensive.

Mitigation – Use scalable, pay-as-you-go cloud solutions and optimize AI model processing to reduce costs.

Uncertain Revenue Scaling – Early adoption rates may be slower than expected, affecting cash flow.

Mitigation – Target multiple revenue streams including individual subscriptions, institutional licensing, and corporate Interviewer Mode.

Data Privacy and Security Risks

Sensitive Data Handling – The platform will process personal data, resumes, and possibly biometric information (facial expressions).

Mitigation – Implement strong encryption, comply with data protection regulations (e.g., GDPR), anonymize stored data when possible, and obtain explicit user consent for data collection and analysis.

By identifying these risks early and preparing mitigation strategies, CareerCraft can maintain reliability, user trust, and long-term sustainability.

7- Scalability and Growth Potential:

CareerCraft is designed with a cloud-based, modular architecture that supports scalability across both user base size and feature set. Its combination of AI-driven interview simulations, resume optimization, and cross-platform compatibility enables the platform to adapt to different markets, industries, and regions without requiring major architectural changes.

Market Demand

With hiring processes increasingly shifting to digital formats, the demand for AI-powered candidate preparation tools is growing rapidly. The global e-learning and career development market is expected to surpass \$400 billion by 2030, and AI-enabled recruitment solutions represent one of the fastest-growing segments. Remote hiring trends, accelerated by hybrid and work-from-home models, further increase the relevance of such tools.

Scalable Technology

- Hosted on cloud platforms such as AWS or Firebase to support on-demand scaling.
- Modular design allows independent deployment of features like Interviewer Mode, resume optimization, and mock interview simulation.
- AI models for speech, text, and facial analysis can be retrained for new industries, languages, and cultural contexts.

Expansion Opportunities

- Geographical Expansion – Can be localized to multiple languages and integrated into regional job markets, making it deployable worldwide.
- Feature Expansion – Future updates could include integration with LinkedIn and other job portals, AI-driven skill assessments, and industry-specific training packs.
- Industry Expansion – Usable in corporate recruitment, educational institutions, government employment programs, and e-learning platforms.

By combining a strong global demand with a flexible, future-ready technology stack, CareerCraft has the potential to evolve into a widely adopted, industry-standard career preparation tool serving individuals, institutions, and organizations worldwide.

8- Implementation and Execution Plan:

To successfully develop and launch CareerCraft, a phased implementation plan will be followed, ensuring both technical readiness and market viability. The plan will include clearly defined milestones, resource allocation, and timelines.

Phase-wise Timeline & Milestones (6–7 Months)

Phase	Duration	Milestone
1. Research & Planning	Month 1	Finalize problem definition, market analysis, feature list, and technology stack. Collect datasets for NLP, speech recognition, and facial emotion analysis.
2. Prototype Development	Month 2	Develop core NLP models for answer evaluation, resume parsing module, and tone/emotion detection system.
3. Core Interview Module	Month 3–4	Build live AI interview simulation with adaptive questioning, integrate speech-to-text, and implement non-verbal communication analysis.
4. Resume Optimization Module	Month 4	Implement resume parsing, job description matching, skill gap detection, and AI-driven improvement suggestions.
5. Dashboard & Progress Tracking	Month 5	Develop user dashboard, historical performance tracking, and feedback reporting system.
6. Testing & Optimization	Month 6	Conduct internal testing, pilot testing with selected universities and HR teams, fix bugs, and optimize AI models.
7. Deployment & Demo	Month 7	Launch fully functional platform, conduct live demonstrations for evaluators and potential clients.

Team Roles & Resource Allocation

Team Member	Role
Bilal Shabbir	Lead developer, integration of AI modules (NLP, speech, computer vision), backend architecture, deployment management.
Iman Faisal	UI/UX design, frontend development, testing and QA coordination.

Resources Required

- **Hardware:** High-performance development laptops/PCs, webcams, microphones, smartphones for mobile app testing.
- **Software:** Python (TensorFlow/PyTorch, OpenCV, spaCy, NLTK), Flutter, Node.js, Firebase/AWS.
- **Cloud Services:** Firebase/AWS for hosting, database, and storage.
- **Testing Tools:** Selenium, Postman, unit testing frameworks (pytest, Mocha).
- **Version Control:** GitHub for code repository and team collaboration.

Sustainability & Scale-up Plan

- Gather feedback from early users and institutional partners post-deployment.
- Refine AI models with real-world usage data to improve accuracy.
- Develop integration options for job portals, corporate HR systems, and e-learning platforms.
- Expand the platform into additional languages and regional markets.
